

OOPS:

Object Orientated Programming Structure.

Method of Implementation of our Program are organized in the form of

- Class
- Method
- Object

Class:

Combination of Methods and Object.

Method:

Set of actions to be Performed.

Object :

- It is instance of the Class.
- It helps to invoke the methods.

Hint:

We must Create a object inside the main method.

Syntax to create object:

```
Classname objName = new Classname();
```

To invoke method:

```
objName.methodName();
```

```
//-----> command line( //Java Compiler doesn't invoke that line )
```
